Ethernet Module Specification

USR-TCP232-E2/ED2

Introduction

USR-TCP232-E2/ED2 is a multi-functional serial-to-Ethernet module that enables bidirectional transparent data transmission between Ethernet port and TTL. USR-TCP232-E2 provides 2 TTL serial ports while the USR-TCP232-ED2 provides 3 TTL serial ports. Both modules adopt ST Cortex-M7 core with a high frequency of up to 400MHz, which has a faster processing and more stable data transmission.

The module supports various working modes such as TCP Server, TCP Client, UDP, Httpd Client, WebSocket, and can be easily configured via built-in webpage or Config Software. At the same time, it integrates TCP/IP protocol stack, which allows users to easily complete the serial-to-Ethernet conversation, saving manpower and development time, making products faster to market and enhancing competitiveness. It supports MQTT protocol easily accessing to mainstream platform like Thingboard, AWS etc. For user's data security, the module also integrates SSL/TLS protocol.
